### Introduction

“A physician that does not know the truth of astrology is not a physician but a fool”- Hippocrates (Father of Medicine)

Astrology is the belief that heavenly bodies affect human behavior and destiny. Most scientists today dismiss astrology as balderdash. But are they not being too hasty? If the sun were to disappear today, will the earth not cease to exist? Would the disappearance of the sun not destroy all our destinies? Is this not astrology? Does the weather not influence the kind of clothes we wear? Does rainfall not change our plans and make us change venues from outdoors to indoors. Is this not heavenly bodies affecting our destinies? Did the Russian winter not affect Napoleon Bonaparte’s plans? Did the Russian winter not affect the outcome of World War 2? If this is not heavenly bodies/weather affecting the destiny of mankind, what is it? Does bad weather not delay flights and cause postponements of trips? Even today scientists admit that the month a child was born affects the child’s behavior. They coined the scientific term “influence of seasonal birth on humans” to describe it but is this not good old-fashioned astrology? Virtually every culture of man since the dawn of history has looked to the heavens for answers. I believe they were on to something. A true scientist must be humble and not jump to conclusions. Many ideas, inventions and concepts were ridiculed by mainstream scientists in the past but are

universally accepted today. These include the personal computer, aspirin, germs, genes, quarks, atoms, continental drift, hand washing before surgery, Avogadro’s Law etcetera [1-4].

### Conclusion

If the heavenly bodies do affect us, I have a theory how.

Microzymas/cellular dust in outer space communicate with microzymas/cellular dust in the human being. This is the link and mechanism. I theorize this to be [5]. How it is done exactly will be a task for scientists to discover.
